

CLAIMS

1. A cosmetic material comprising a crosslinked product of poly- γ -glutamic acid and/or a crosslinked product of a poly- γ -glutamic acid salt
5 having a particle size of 0.1 to 100 μm and an average particle size of 1 to 50 μm .

2. The cosmetic material according to claim 1, wherein said crosslinked product of poly- γ -glutamic acid and/or said crosslinked product of a
10 poly- γ -glutamic acid salt is contained in an amount of 0.001 to 20% by mass.

3. The cosmetic material according to claim 1, wherein said crosslinked product of poly- γ -glutamic acid or said crosslinked product of a poly- γ -glutamic acid salt are produced by exposing at least one solution selected from the group
15 consisting of an aqueous solution, a methyl alcohol solution and an ethyl alcohol solution of poly- γ -glutamic acid or the poly- γ -glutamic acid salt which contain poly- γ -glutamic acid in an amount of 2 to 30% by mass, to radiation for crosslinking thereof.

20 4. The cosmetic material according to claim 1, wherein said radiation is γ -ray or electron beam.

5. The cosmetic material according to any of claims 1 to 4, wherein said cosmetic material is used as hair cosmetic materials, skin cosmetic materials
25 or nail cosmetic materials .

6. A cosmetic material comprising an oiliness agent selected from the group consisting of vegetable oils, higher alcohols or esters thereof, higher fatty esters and liquid paraffins, and a crosslinked product of poly- γ -glutamic
30 acid and/or a crosslinked product of a poly- γ -glutamic acid salt as an oil dispersion modifier.

7. The cosmetic material according to claim 6, wherein said crosslinked product of poly- γ -glutamic acid or said crosslinked product of a poly- γ -glutamic acid salt has a particle size of 0.1 to 100 μm and an average particle size of 1 to 50 μm .

5

8. The cosmetic material according to claim 6, wherein said oiliness agent is contained in an amount of 0.01 to 80% by mass, and said crosslinked product of poly- γ -glutamic acid and/or said crosslinked product of a poly- γ -glutamic acid salt are contained in an amount of 0.1 to 30% by mass.

10

9. The cosmetic material according to claim 6, wherein said crosslinked product of poly- γ -glutamic acid or said crosslinked product of a poly- γ -glutamic acid salt are produced by exposing at least one solution selected from the group consisting of an aqueous solution, a methyl alcohol solution and an ethyl alcohol solution of poly- γ -glutamic acid or the poly- γ -glutamic acid salt which contain poly- γ -glutamic acid in an amount of 1 to 30% by mass, to radiation for crosslinking thereof.

15

10. The cosmetic material according to claim 9, wherein said radiation is γ -ray or electron beam.

20

11. The cosmetic material according to any of claims 6 to 10, wherein said cosmetic material is used as hair cosmetic materials, skin cosmetic materials or nail cosmetic materials .

25
